

سازہ ہاے نمک آناہیت

Due to specific, organized and crystal structure of salt rocks, they can pass the light through themselves; and because of that, they have special usage for Beautification decorative spaces.

Despite of its name, salt rock has physical and chemical behaviors that make it different from other rocks; one of the properties of rock salt is the release of negative ions from its surface.

Today, quantum science, modern biology, and bio resonance have proven that the abundance of negative ions in space balances the bipolar electromagnetic field of the human brain.

This phenomenon creates calmness, expansion of mind and tangible vitality in people who are exposed to the spraying of negative ions.

A similar condition in nature is the relaxation of humans when they are near the beach, waterfall or desert, which is because of the abundance of negative ions (which have been introduced in scientific articles as air vitamins) existed in these places.

Rocks to Blocks Blocks to Constructure

Salt rock blocks that are extracted from different mines have streaks of different colors. colors of these blocks are very beautiful and eye-catching even without any lighting from behind the walls. The appearance of white, yellow, red, crimson, snow, pink, green, etc. is truly magnificent together. Watching the delightful and pleasant rainbow of salt rock blocks is a pure manifestation of the beauty of nature that looks interesting and beautiful for everyone.

The material and density of salt blocks is very important in the strength of salt constructures; Choosing the highest quality and strongest stones requires specific knowledge, expertise and of course own experience and skills. An expert team including miners and lithologists, by examining the types of mines, selects the best type of stone to be implemented that must be resistant to physical pressure, capable of withstanding a lot of heat depending the tolerance of the constructor's lighting, and must be the type of little moisture.

Beauty of Light and Colors

from among the different colors of the blocks themselves, the color of the light behind the walls and the different lighting modes can also be varied, so the lighting mode can be adjusted how you like it.

In this place, people who want to set the color of the walls with their decoration can choose the desired color between different colors;

On the other hand, this possibility can be very attractive for people who are looking for variety and are bored of monotony, and they can change the color of the lighting whenever they want by pushing a button.

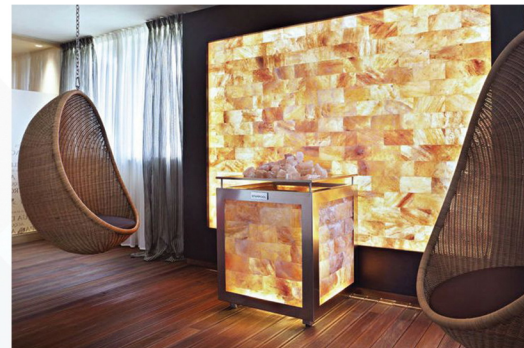

Human and Nature

Salt constructs are considered as a kind of interior decoration and are completed after the joinery phase and complete cleaning of the building from dust.

These constructs usually have their own special positions in hotels and tourist centers, federations and sports centers, yoga halls, meditation rooms, villas, towers, luxury and branded commercial and residential buildings and come more in attention every day.

When you make a wall made of nature, you release the original soul of nature to it, so you give its variety of colors to your eyes, which is naturally extremely beautiful, eye-catching and dazzling.

Salt walls or salt rooms made of Salt rocks, such as you see in wooden or thatched buildings, can rejuvenate the worn-out connection of modern man with nature compared to concrete and stone buildings. In other words, the lost man in today's industrial and modern world, whenever returns to the loving embrace of his mother (nature), it is as if he rediscovers himself and achieves indescribable peace and vitality. Salt and salt rock is one of the manifestations of pristine and beautiful nature in the depths of the earth, which has been highly regarded by modern man.

Another property of salt chambers is that in addition to the effect of negative ions on the equilibrium of the electromagnetic field of the bipolar brain, negative ions due to their electrical charging property are able to statically react cling to airborne particles such as dust, mold, particles microbes and other contaminants and charge them; Instead of being suspended in space, these particles fall to the ground or the nearest available surface because of their charge, and the air becomes cleaned and sterilized. For this reason, the air in these rooms always remains clean and sterile.

AnaHit Salt Construction Company

AnaHit Salt Construction Company has professional teams consisting of experienced architects, designers, engineers, consultants and specialists who provide knowledge and services on the basis of their many experiences in various and beautiful designs about salt and salt rocks, as well as the construction of the most specialized and basic salt structures.

AnaHit Salt Construction Company is proud that based on a precious treasure of knowledge, specialized tested and experimented sciences, as well as believing in its constructive steps, can leave specialized and beautiful structures that are always reminiscent of happy memories and Iranian health diamonds.
